

Selected Social Characteristics in the United States: 2006-2008
 Data Set: 2006-2008 American Community Survey 3-Year Estimates
 Survey: American Community Survey
 Geographic Area: Riverbank city, California

NOTE. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

For more information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

| Selected Social | Estimate | Margin of Error (+/-) | Percent | Margin of Error (+/-) |

Source: U.S. Census Bureau, 2006-2008 American Community Survey

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Notes:

- Ancestry listed in this table refers to the total number of people who responded with a particular ancestry; for example, the estimate given for Russian represents the number of people who listed Russian as either their first or second ancestry. This table lists only the largest ancestry groups; see the Detailed Tables for more categories. Race and Hispanic origin groups are not included in this table because they are included in the race and ethnicity tables.
- The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Because of this change, the 2008 ACS data generally reflect the November 2007 Office of Economic Opportunity survey.
- Data for year of entry of the native population reflect the year of entry into the U.S. by people who were born in a foreign country.
- While the 2008 American Community Survey (ACS) data generally reflect the November 2007 Office of Economic Opportunity survey, the 2008 ACS data for the District of Columbia reflect the 2008 ACS data for the District of Columbia.
- Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban and rural areas as defined by the Census Bureau.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to calculate a margin of error.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to calculate an estimate.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test indicates that the estimate is significantly different from zero.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area could not be obtained.
8. An '(X)' means that the estimate is not applicable or not available.

Selected Economic Characteristics: 2006-2008
 Data Set: 2006-2008 American Community Survey 3-Year Estimates
 Survey: American Community Survey
 Geographic Area: Riverbank city, California

NOTE. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

For more information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

Source: U.S. Census Bureau, 2006-2008 American Community Survey

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Notes:

·Employment and unemployment estimates may vary from the official labor force data released by the Bureau of Labor Statistics because of differences in survey design and data collection. For guidance on differences in employment and unemployment estimates from different sources go to Labor Force Guidance.

·Workers include members of the Armed Forces and civilians who were at work last week.

·Occupation codes are 4-digit codes and are based on Standard Occupational Classification 2000.

·Industry codes are 4-digit codes and are based on the North American Industry Classification System 2000.

·While the 2008 American Community Survey (ACS) data generally reflect the November 2007 Office of Economic Policy and Research (OEP&R) data, some data may reflect the 2007 Census of Economic and Demographic Statistics (CED&S).

·Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban and rural areas as defined by the Census Bureau.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to calculate a margin of error.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to calculate an estimate.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test is used to determine if the estimate is significantly different from zero.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area could not be obtained.
8. An '(X)' means that the estimate is not applicable or not available. Selected earnings and income data are not available for some geographic areas.

Selected Housing Characteristics: 2006-2008
 Data Set: 2006-2008 American Community Survey 3-Year Estimates
 Survey: American Community Survey
 Geographic Area: Riverbank city, California

NOTE. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

For more information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

Source: U.S. Census Bureau, 2006-2008 American Community Survey

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Notes:

·For more information on understanding race and Hispanic origin data, please see the Census 2000 Brief entitled, Overview of Race and Hispanic Origin, issued March 2001. (pdf format)

·While the 2008 American Community Survey (ACS) data generally reflect the November 2007 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain

·Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban a

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sam
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample obs
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended disti
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended disti
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or uppe
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test i
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area c
8. An '(X)' means that the estimate is not applicable or not available.
